June 2022

offline

- Work as a front-end developer on the Smart City website. Create posters and social media posts for Smart City. Complete the training in Server Management

Projects

Thought Echo | React, Postgres, Prisma, hono, Zod | Live

- It is a blogging web application. On the frontend, I am using the React library and Vite as a framework. For the backend, I have chosen Cloudflare workers due to their serverless function to run as close as possible to the end user. I'm also using Zod as a validation library, Prisma as an ORM with connection pooling, and jwt for authentication."
- Here We can upload our daily vlog we use postgres just because of predefined schema also have connection pooling to manage resources.

Stock price prediction | React, Django, Machine Learning | Live

- It is a team project which use to help the investors. Basically, it will predict the price on basis of past data using LSTM(Long-short-term-memory) field of Deep learning.
- I have worked on the front-end part and some back-end part.

Connectwave | MERN, Redux, Jwt-authentication, Bart, Huggingface API |

- Social networking platform with automated content moderation and context-based authentication system
- It uses many NLP APIs: Perspective API, TextRazor API, and Hugging Face Interface.
